

Canopus

Canopus is an insurance group which manages and has underwriting participations on syndicates at Lloyd's. Canopus Managing Agents Limited falls under the jurisdiction of the FSA.

Business Challenge

Canopus came to CWL in 2008 with an Exchange problem that needed solving quickly. Their Exchange server, which was supporting 300 users, was running out of capacity: The mailstore were becoming too big, leading to performance problems and concerns about long-term system stability.

Solution

CWL, with an eye to the future, recommended Symantec Enterprise Vault. The recommendation was quickly accepted and the solution implemented.

Benefits

The benefits were almost instantaneous:

- Total mailstore size reduced by 40% overnight.
- Performance improved, stability concerns were allayed.
- Mailbox limitations could be lifted
- People can navigate and search their entire mail history simply.

In addition, storage cost growth has slowed as Enterprise Vault transparently moves less-used content to lower cost devices.

Customer Case Study

CANOPIUS

Work in progress

Canopus are also implementing File System Archiving and Journaling options of Enterprise Vault. The objective here is to make compliance easier and cheaper to demonstrate.

Brent Gebbie, IT Manager at Canopus, is pleased with progress. "Enterprise Vault and CWL solved our immediate issues well, and they are now helping us address more strategic concerns. It was a good call"
